Bandit 1 (Level 1 Robber)

Stats, behavior and every tunable value. Shinobi Rush, generated from the source on 2026-10-24. Units: seconds, world pixels (a standing figure is 108 px tall), HP points. Where to edit: **bandit.gd** = scripts/enemy/bandit.gd (exports, also editable per-instance in the Godot inspector); **profile** = EnemyIntelligence.LEVELS[1] in scripts/enemy/enemy_intelligence.gd (the one place for AI feel); **hard-coded** = a constant inside code, change the source.

What is new in this version

Substitution jutsu: when a hit would land he may (sub_chance) swap with a log, take no damage, and reappear sub_behind_dist behind you, costing one charge and sub_chakra_cost chakra. 2 charges, each back after sub_recharge. **Three-kunai combo:** one throw now releases throw_burst_count kunai in a fan, throw_burst_gap apart. Both are fully profile-driven. I read "all three kunai combo" as a 3-kunai throw; if you meant something else, it is one number (throw_burst_count) plus the fan angle.

1. At a glance: Bandit 1 vs Player

	Bandit 1	Player
Max HP	60	100
Walk / chase speed (px/s)	320 patrol-chase walk / 470 sprint	394 walk / 608 sprint
Melee	2-swing combo, 8 dmg per swing, reach 150, arc 100 deg, knockback 180	light1 10 / light2 13 / light3 20, reach 95-110
Ranged	3 kunai fan, 6 dmg each (18 if all hit), speed 520, range 560	1 kunai, 8 dmg, speed 640, range 520 (10 carried)
Dodge	Evade burst 640 px/s for 0.20 s, 1.25 s cooldown	Body Flicker 150 px, 0.30 s
Substitution	2 charges, 25 chakra each, 15 s recharge, 60% when hit	3 charges, 20 s recharge each, timed L2 within 0.25 s of the hit
Chakra	100 max, +4/s	100 max
Hits to kill (light1, 10 dmg)	6 hits (before any substitution swallows one)	13 melee swings of 8 dmg (100 HP)
Full kunai combo, all land	18 damage (18% of player HP)	-

Rule of thumb: with 2 swaps he effectively absorbs up to 2 extra hits, so ~8 hits of light1 in practice if he swaps every time; at 60% chance it averages about 1.2 absorbed hits.

2. Core stats (exports on bandit.gd)

Name	Value	What it does	Where
max_hp	60	Hit points	bandit.gd
intelligence_level	1	Selects the profile row in section 3	bandit.gd
intelligence	5	Sense stat. Sense radius = clamp(220 + 16 x int, 120, 900) = 300 px; only used while the player sprints	bandit.gd
detect_radius	420	Legacy detect range, mostly superseded by sight_range	bandit.gd
combat_distance	130	Distance at which he stops chasing and threatens	bandit.gd
move_speed	320	Walking speed while chasing close / not seeing player	bandit.gd
chase_speed	470	Sprint speed when player is more than 250 px away	bandit.gd
evade_speed / evade_duration / evade_cooldown	640 / 0.20 / 1.25	Sidestep burst when you lock on or rush him within 260 px	bandit.gd
hit_react_duration / hit_flash_duration	0.22 / 0.12	Stagger time and white flash after being hit	bandit.gd
roam_radius / roam_pause / return_settle_time	260 / 0.4 / 0.4	Guard-home wandering	bandit.gd
ryo_steal_threshold	30	A landed melee hit steals ALL your ryo if you hold less than this	bandit.gd

Name	Value	What it does	Where
max_chakra / chakra	100 / 100	Pool spent by substitution (now used)	bandit.gd
max_substitutions / substitutions	2 / 2	Log-swap charges (now used)	bandit.gd
THROW_RELEASE_AT	0.7	Animation point where the kunai leaves the hand (visual only)	hard-coded
TAUNT_TEXT / TAUNT_TIME	"Hand over your ryo!" / 2.4	Threaten bubble	hard-coded
Melee damage / knockback	8.0 / 180	Every swing (_try_hit)	hard-coded in bandit.gd
Kunai HIT_RADIUS / MAX_RANGE	22 / 560	Kunai hit size and life distance	hard-coded in bandit_kunai.gd
Initial throw cooldown	2.0	Starts at 2.0 s on spawn	hard-coded

3. AI profile: EnemyIntelligence.LEVELS[1] (all tunable in one place)

Key	Value	Meaning
name	Level 1 robber	
sight_range	450.0	how far it can see in its facing cone
fov_deg	90.0	NARROW awareness: only what is in front of it
close_sense	70.0	it still notices someone right behind/next to it
notice_delay	0.65	suspicion pause before it commits to a hunt (slow reaction)
repath_interval	0.7	slow re-acquisition / re-planning
lose_sight_time	2.2	chasing without seeing the player this long -> go search
search_duration	3.2	looking around at the last seen spot
chase_leash	1500.0	bounded chase: gives up this far from its patrol home
threaten_time	0.95	first-contact "hand over your ryo" pause
rethreaten_time	0.45	later pauses between attack rounds
attack_windup	0.42	readable tell before every swing
attack_active	0.10	
attack_recovery	0.38	
combo_gap	0.20	gap before the second swing's tell
overcommit_chance	0.40	swing 2 lunges on a frozen aim and ends in final_recovery
final_recovery	0.85	long punish window after an overcommitted combo
lunge_speed	260.0	forward step during an active swing
overcommit_lunge_speed	420.0	
attack_cooldown	2.2	
retreat_chance	0.25	rare double flicker after a combo
retreat_telegraph	0.35	
retreat_recovery	0.7	
flicker_distance	230.0	per hop, straight back from the player
flicker_hop_time	0.09	
flicker_pause	0.16	
reposition_time	0.55	the common "step back and re-think" after a combo
reposition_speed	210.0	
patrol_wait	1.6	
patrol_speed	130.0	
attack_reach	150.0	
attack_arc_deg	100.0	
throw_first_delay	2.0	no kunai for this long after first spotting the player
throw_min	190.0	closer than this he melees instead
throw_range	420.0	farther than this he keeps chasing
throw_windup	0.42	tell; aim tracks the first half, then freezes
throw_recovery	0.3	punish window after the LAST kunai
throw_cooldown	3.5	between throw combos
throw_damage	6.0	per kunai
throw_speed	520.0	
throw_burst_count	3	kunai per throw combo

Key	Value	Meaning
throw_burst_gap	0.14	seconds between kunai in the combo
throw_spread_deg	9.0	angle between neighbouring kunai in the fan
sub_chance	0.6	chance he uses a charge when hit and able
sub_chakra_cost	25.0	chakra per use
sub_recharge	15.0	seconds for a spent charge to come back
sub_behind_dist	72.0	how far behind the player he reappears
sub_invuln	0.5	grace after a swap
sub_min_gap	1.0	minimum seconds between two swaps
chakra_regen	4.0	chakra per second

4. Behavior

State flow: PATROL/IDLE (guards home, wanders roam_radius) -> NOTICE (notice_delay 0.65 s, sees you in a 90 deg cone out to 450 px, or within 70 px any direction) -> APPROACH (walks or sprints) -> THREATEN (0.95 s first time, 0.45 s after) -> ATTACK melee or kunai throw -> REPOSITION / RETREAT / THREATEN again. Losing sight for 2.2 s -> SEARCH 3.2 s -> RETURN home. HIT_REACT on every damage. EVADE when you lock on or rush him.

Melee timeline (per combo): windup 0.42 s (telegraph) -> active 0.10 s (8 dmg if you are within 150 px, in the 100 deg arc, line clear) -> recovery 0.38 -> gap 0.20 -> second swing the same way. Then attack_cooldown 2.2 s. After the combo: 25% double flicker back (retreat), else 60% of the rest a step back (reposition 0.55 s), else threaten again. 40% of second swings are an overcommit: frozen aim, 420 lunge, 0.85 s final recovery (big punish window, no retreat).

Kunai combo timeline: needs line of sight, distance 190-420 px, throw cooldown clear (first throw 2.0 s after spotting you). Windup 0.42 s (aim tracks you for the first half, then freezes: sidestep after the freeze to dodge) -> kunai 1 (-9 deg), +0.14 s kunai 2 (0 deg), +0.14 s kunai 3 (+9 deg) -> recovery 0.30 s (punish window) -> 3.5 s cooldown. Total commitment about 1.0 s. All three go through the same dodge/jump/substitution check as a melee hit.

Substitution: checked at the moment a player hit would land (not while mid-flicker or within sub_invuln of a prior swap). Needs a charge, sub_chakra_cost chakra and sub_min_gap since the last swap; then rolls sub_chance. On success: no damage and no hitstop, a log-swap effect plays, he reappears sub_behind_dist behind you (tries nearby angles if a wall blocks), cancels his current attack, is invulnerable sub_invuln, and goes straight to THREATEN with attack cooldown cleared (counter-pressure). Charges return one at a time every sub_recharge.

Evade: separate from substitution. If you have him lock-on targeted, or run at him faster than 100 px/s, within 260 px, and he has no attack ready and evade is off cooldown, he bursts sideways (alternating sides).

Damage reaction: take_damage resets his attack, enters HIT_REACT for 0.22 s with the knockback you applied, and adds at least attack_cooldown x 0.5 to the attack delay if he was attacking.

5. Player numbers (for comparison)

Move	Startup / active / recovery (frames @60)	Damage	Reach	Arc +/-	Hitstop ms	Knockback
light1	5 / 4 / 9	10	95	40	40	140
light2	6 / 4 / 11	13	100	-	45	170
light3 (finisher)	9 / 5 / 15	20	110	45	-	260
dash_attack	6 / 5 / 13	16	120	35	55	220
air_attack	5 / 4 / 10	11	95	50	-	150
kunai throw	-	8	range 520, speed 640	-	-	-

Player: 100 HP, 100 chakra, hit invulnerability 0.45 s, walk 394 / sprint 608 px/s, accel 3150, friction 4050. Timed substitution: press L2 up to 0.25 s before the hit; costs 1 of 3 charges (20 s each), 0.5 s invulnerability, reappear 72 px behind the attacker.

6. How to tweak

Make him easier: lower throw_burst_count, throw_damage, sub_chance; raise throw_windup, attack_windup, throw_recovery. Make him harder: raise sub_chance / max_substitutions, lower sub_recharge, shorten attack_cooldown and throw_cooldown. Make him a pure melee thug: set throw_burst_count 1 or throw_range 0. Turn substitution off: sub_chance 0. Change melee damage (8.0) and knockback (180): edit the hard-coded numbers in _try_hit in bandit.gd. Tell me the values you want and I will apply them.

Balance caveat: these numbers are my first pass. Feel, difficulty and animation of the new substitution (it re-uses the player log-swap effect) cannot be judged by the automated tests; try it in game.
